

CRYOGENIC IN-LINE ADAPTERS

SERVING THE CRYOGENIC MARKET, ONE CONNECTION AT A TIME

QUICK FACTS

- Gold-plated copper outer conductor
- SMA and 2.92 connectors
- Available in f/f and m/f options
- Up to 40GHz
- Agreeable length for replacing attenuators

ABOUT THIS PRODUCT

XMA is constantly adding value to quantum computers by expanding our cryogenic product line! Our most recent launch is a series of in-line adapters with gold-plated copper bodies.

Their outer conductor materials ensure tight thermal anchoring, and they boast a low VSWR to keep your signal integrity. They are designed in our standard attenuator and bulkhead attenuator mechanical fits to ensure they are easily interchangeable with other products in your cryostat, no new cabling or connection points required. Contact us today to hear more about our new product line!
